Castellanza, 01/11/2019

REF: CUSTOMS PROTOCOL 91956RU – PROCEDURE CHANGE IN RELEASING EUR 1, EUR MED.

Effective from April 30nd 2021, unless last minute extention, there will be significant changes in the release of the certificate EUR 1 / EUR MED.

The actual procedure based on the pre-endorsement of the certificates which are daily requested and validated through the official stamp “CONALBI” will be no longer valid.

Therefore, it is highly recommended each and every supplier applies for the status of APPROVED EXPORTER (AE).

This will simplify the export formalities by certifying the preferential origin of the goods by including a specific statement on the invoice or on any other commercial document identifying the exported products.

Thus, the Approved Exporter is not obliged to apply upon each export to issue the movement certificate as stated above.

The application of the AE status is a one-off formality, where the exporter provides the competent customs office with the necessary information.

Once the authorization is released, it is valid for all exports during the period of the authorization and for the countries where bilateral agreements are in place.

In case the Exporter does not benefit of Approved status, things will get complicated.

If the value of the goods exported is less than Eur 6000=, certification is still not needed.

However if the value is exceeding EUR 6000, the procedure will be longer and complex:

before the export formalies are carried out, the shipper will have to submit customs with all the documents evidencing the preferential origin, on the other side the Customs Authorities will take time to evaluate the correctness of the information provided before giving his approval.

In this moment the timing to get the certificate completed is unpredictable, it might go from 1 up to 9 days.

That’s the reason why we suggest to exporter to start the procedure to get Approved Exporter status without furhter delay.
